Declaration of Conformity

We, Edwards,
Manor Royal,
Crawley,
West Sussex, RH10 9LW, UK

declare under our sole responsibility, as manufacturer and person within the EU authorised
to assemble the technical file, that the product(s)

Vacuum Interlock Switch
IS16K D059-14-000

to which this declaration relates is in conformity with the following standard(s) or other
normative document(s)

EN61010-1: 2001 Safety Requirements for Electrical Equipment for Measurement,
Control and Laboratory Use. General Requirements

and fulfils all the relevant provisions of

2006/95/EC Low Voltage Directive

Note: This declaration covers all product serial numbers from the date this Declaration was
signed onwards.

Date and Place

9 December 2009

Mr L. Marini, Technical Manager

This product has been manufactured under a quality system registered to ISO9001

INTRODUCTION

1.1 Scope and definitions

This manual provides installation, operation and maintenance instructions for the Edwards IS16K Vacuum Interlock Switch. Read this manual before attempting to install and operate the IS16K.

This manual contains essential safety information which supplements the safety features of the IS16K. Safety procedures are highlighted as WARNING and CAUTION instructions. You must obey these instructions. The use of WARNINGS and CAUTIONS is defined below.

**WARNING**

Warnings are given where failure to observe the instruction could result in injury or death to people.

**CAUTION**

Cautions are given where failure to observe the instruction could result in damage to the equipment, associated equipment and process.

1.2 General description

The Edwards IS16K Vacuum Interlock Switch is designed for applications where the electrical circuits within the vacuum chamber must be de-energised when the vacuum system is let up to atmosphere.

Typical applications would be the interlocking of H.T. and R.F. power supplies on vacuum coating systems. The interlocking switch consists of a positive break microswitch operated by a snap action diaphragm to ensure rapid separation of the microswitch contacts.

The diaphragm is enclosed within the vacuum switch housing which is surrounded by atmospheric pressure and is coupled to the vacuum system by a NW16 flange. The absolute switch point pressure will therefore vary by the same amount as the atmospheric pressure.

The set-point is non-adjustable and cannot be tampered with.
## 2 TECHNICAL DATA

### 2.1 Operating conditions

3 INSTALLATION

3.1 Unpacking and inspection

Remove all packing materials and protective covers and check the IS16K for damage. If the IS16K is damaged, notify your supplier and the carrier in writing within three days; state the Item Number of the IS16K together with your order number and your supplier's invoice number. Retain all packing materials for inspection. Do not use the IS16K.

3.2 General

The vacuum switch should be mounted as close as possible to the point at which the pressure is to be measured. Use a short branch tube with an internal diameter no less than that of the switch vacuum connection. Long, narrow and angled connections can cause significant errors.

This equipment is not protected from dripping water from above, unless mounted with the vacuum flange pointing downwards.

3.3 Connection to the Vacuum System

**WARNING**

Do not allow the internal pressure to be higher than 1 bar gauge (2 bar absolute). If the pressure in your system can be higher than 1 bar gauge, you must fit a suitable pressure relief valve. Overpressure of the switch could cause injury to persons.

The vacuum switch may be mounted in any orientation but mounting with the vacuum switch vertical will prevent the possibility of debris falling into the vacuum port and affecting the performance of the switch.

3.4 Connection to the Electrical Circuit

**WARNING**

Ensure that the electrical installation of the Vacuum Switch conforms with your local and national safety requirements. It must be connected to a suitably fused and protected electrical supply and a suitable earth point.

**CAUTION**

Ensure that the circuit connected to the vacuum switch is suitably fused to prevent the switch contact rating being exceeded. The fuse rating must not exceed 10 amps.

**WARNING**

If, in your application, failure of this switch could lead to a safety hazard, it is recommended that the switch should be wired in series with another interlocking device, for example chamber lid microswitch, to provide a double level of protection.
Connect the vacuum switch to the equipment using the four pole mPm connector supplied. The contacts on this connector are internally wired as follows:

**Figure 1 - Vacuum switch plug connections**

- **Com**: Common
- **Lo**: Contact made when system pressure is lower than set-point.
- **3 = Com**
- **1 = Lo**
- **2 = HI**

**CAUTION**

To ensure that the socket cable gland strain relief is effective a cable with a minimum diameter of 6 mm must be used.

Select a three or four core cable of a rating suitable for the power supply to be switched. One core should be coloured green/yellow for the earth connection.

Thread the cable through the cable gland on the mPm socket cover and connect to the appropriate terminals as shown on the diagram.

Tighten the cable gland and connect the socket to the switch using the sealing gasket and locking screw provided.
4 OPERATION

4.1 Adjustment

The IS16K Vacuum interlock switch is pre-set to operate in the range of 250 to 500 mbar below atmospheric pressure. No user adjustment is available.

Figure 2 - Dimensions of IS16K vacuum switch
5 MAINTENANCE

WARNING

Ensure that maintenance is done by a suitably trained and supervised technician. Obey your local and national safety requirements.

To ensure correct operation this vacuum switch should be tested once per year or every 10 000 cycles whichever is sooner.

To test for correct operation proceed as follows:

1. Disconnect the electrical supply from the vacuum switch.

2. Connect an electrical continuity meter between the pin marked 'com' and the pin marked 'Lo’. Refer to Figure 1 for pin connections.

3. With the IS16K at atmosphere verify that the meter reads open circuit.

4. Reduce the pressure to below 500 mbar (as measured on a vacuum gauge) and check that the meter reads short circuit.

5. Raise the pressure to above 500 mbar and check that the meter reads open circuit again.

The outer surfaces of the switch may be cleaned by wiping with a dry cloth. Avoid the use of solvents that may attack the moulded cover.

This product contains no user serviceable parts.
6 STORAGE AND DISPOSAL

6.1 Storage

Store in a cool dry place. Do not exceed the limits specified in Section 2.

6.2 Disposal

Dispose of the IS16K in accordance with any local or national safety requirements.

Particular care must be taken if the switch has been used in a hazardous environment.

Return of Edwards Equipment - Procedure

INTRODUCTION
Before returning your equipment, you must warn Edwards if substances you used (and produced) in the equipment can be hazardous. This information is fundamental to the safety of our Service Centre employees and will determine the procedures employed to service your equipment.

Complete the Declaration (HS2) and send it to Edwards before you dispatch the equipment. It is important to note that this declaration is for Edwards internal use only, and has no relationship to local, national or international transportation safety or environmental requirements. As the person offering the equipment for shipment, it is your responsibility to ensure compliance with applicable laws.

GUIDELINES
• Equipment is 'uncontaminated' if it has not been used, or if it has only been used with substances that are not hazardous. Your equipment is 'contaminated' if it has been used with any substances classified as hazardous under EU Directive 67/548/EEC (as amended) or OSHA Occupational Safety (29 CFR 1910).
• If your equipment has been used with radioactive substances, biological or infectious agents, mercury, polychlorinated biphenyls (PCB’s), dioxins or sodium azide, you must decontaminate it before you return it to Edwards. You must send independent proof of decontamination (for example a certificate of analysis) to Edwards with the Declaration (HS2). Phone Edwards for advice.
• If your equipment is contaminated, you must either:
  • Remove all traces of contamination (to the satisfaction of laws governing the transportation of dangerous/hazardous substances).
  • Or, properly classify the hazard, mark, manifest and ship the equipment in accordance with applicable laws governing the shipment of hazardous materials.

Note: Some contaminated equipment may not be suitable for airfreight.

PROCEDURE
1. Contact Edwards and obtain a Return Authorisation Number for your equipment.
2. Complete the Return of Edwards Equipment - Declaration (HS2).
3. If the equipment is contaminated, you must contact your transporter to ensure that you properly classify the hazard, mark, manifest and ship the equipment, in accordance with applicable laws governing the shipment of contaminated/hazardous materials. As the person offering the equipment for shipment, it is your responsibility to ensure compliance with applicable law.

Note: Equipment contaminated with some hazardous materials, such as semiconductor by-products, may not be suitable for airfreight - contact your transporter for advice.
4. Remove all traces of hazardous gases: pass an inert gas through the equipment and any accessories that will be returned to Edwards. Where possible, drain all fluids and lubricants from the equipment and its accessories.
5. Seal up all of the equipment’s inlets and outlets (including those where accessories were attached) with blanking flanges or, for uncontaminated product, with heavy gauge tape.
6. Seal equipment in a thick polythene/polyethylene bag or sheet.
7. If the equipment is large, strap the equipment and its accessories to a wooden pallet. If the equipment is too small to be strapped to a pallet, pack it in a suitable strong box.
8. E-mail via scan, fax or post a copy of the original with signature of the Declaration (HS2) to Edwards. The Declaration must arrive before the equipment.
9. Give a copy of the Declaration (HS2) to the transporter. You must tell your transporter if the equipment is contaminated.
10. Seal the original Declaration in a suitable envelope: attach the envelope securely to the outside of the equipment package, in a clear weatherproof bag.

WRITE YOUR RETURN AUTHORISATION NUMBER CLEARLY ON THE OUTSIDE OF THE ENVELOPE OR ON THE OUTSIDE OF THE EQUIPMENT PACKAGE.
Return of Edwards Equipment – Declaration

You must:
• Know about all of the substances which have been used and produced in the equipment before you complete this Declaration
• Read the Return of Edwards Equipment - Procedure (HS1) before you complete this Declaration
• Contact Edwards to obtain a Return Authorisation Number and to obtain advice if you have any questions
• Send this form to Edwards before you return your equipment as per the procedure in HS1

SECTION 1: EQUIPMENT

Manufacturer's Product Name ________________________
Manufacturer's Part Number _______________________
Manufacturer's Serial Number ________________________
Has the equipment been used, tested or operated?
YES □ Go to Section 2 NO □ Go to Section 4

IF APPLICABLE:
Tool Reference Number _______________________
Process _______________________
Failure Date _______________________
Serial Number of Replacement Equipment _______________________

SECTION 2: SUBSTANCES IN CONTACT WITH THE EQUIPMENT

Are any substances used or produced in the equipment:
• Radioactive, biological or infectious agents, mercury, poly chlorinated biphenyls (PCBs), dioxins or sodium azide? (if YES, see Note 1) YES □ NO □
• Hazardous to human health and safety? YES □ NO □

Note 1: Edwards will not accept delivery of any equipment that is contaminated with radioactive substances, biological/infectious agents, mercury, PCB’s, dioxins or sodium azide, unless you:
• Decontaminate the equipment
• Provide proof of decontamination
YOU MUST CONTACT EDWARDS FOR ADVICE BEFORE YOU RETURN SUCH EQUIPMENT

SECTION 3: LIST OF SUBSTANCES IN CONTACT WITH THE EQUIPMENT

<table>
<thead>
<tr>
